

## >>> > Shiny Rims

Have you ever woken up in the morning gotten out of bed and looked at yourself in your shiny wheels? No? Maybe that's because you haven't got shiny wheels. Now you can with a product called BriteShine® available at AutoOne for 14.95

Below are the steps taken to get shiny rims.

1. Tear a small portion of the wadding and rub the wheel, work harder at grime areas until you are happy you've lifted dirt from the wheel.
2. Now get a soft rag or polishing cloth and polish the wheel until you are satisfied with the shine you have.

Now that was easy, and look at the results.

Before shows the brake dust buildup and tar splatters

After shows a brilliant shine, and I only spent 10mins on all 4 rims so you guys/gals should be able to get even better results 😊
